

Outreach@ St Joseph Kindergarten 31st March 2016

- The Environmental Science Club outreach programmes aim to develop leadership through service. Through these programmes, our pupils are given opportunities to work and spread environmental messages to save our Earth.
- After weeks of preparation and making our very own materials, our pupils went to St Joseph Kindergarten to play games, perform a skit and share with the kindergarten children about the different recyclable materials. It was a fruitful session!

Colouring Activity

Pupils designed their very own colouring pages that convey some messages to save our Earth.

Skit : The Litter Girl

The pupils crafted their script and acted it out. The skit was about how a girl who always litters finally learnt her lesson on the importance of keeping the environment clean.

Memory Concentration Game
The kindergarten pupils take turns to flip the cards.
