

Visit to Vertical Garden @ Bukit Panjang

On 03 July 2018, 20 Environmental Science Club members visited the Vertical Garden@Bukit Panjang. In line with our school's Applied Learning Programme, the visit was part of our school's effort to expose our pupils to urban farming and how they can apply what they have learnt in their daily lives thereafter. The members were guided by the Vertical Farm facilitators to learn more about this urban farming concept and other areas related to urban farming and food source.

Putting the compost and soil into the pots.

Facilitator explaining the procedures to pot the vegetables.

Environmental Science Club members with their completed pots of vegetables.
