

# OUTREACH PROGRAMME @ ST JOSEPH KINDERGARTEN

On 11 April, our environmental science pupils went to the St Joseph Kindergarten as part of our outreach programme to the little preschoolers. This outreach programme provides for our girls an opportunity to contribute to the society.

Through this programme, we aim to instil good environmental practices among the preschoolers and to encourage them to take ownership in playing an active role in protecting the environment.

The Environmental Science Club members presented a skit on the importance of not wasting food...

The Environmental Science Club members guided the preschoolers playing an environment game.

The games played were designed by our members.

The preschoolers practised the virtue of purposefulness in designing their very own pledge.
